

Australian designed
and tested

Trithor is designed and tested in Australia to suit Australian conditions and to protect against the voracious termites native to Australia. Trithor is made by Ensystex, a privately owned international company with many years specialisation in termite management solutions. Australia is the regional headquarters for Australia and SE Asia and also the location of one of the company's global research and development facilities.

Environmentally friendly

Trithor is ideal for use in sensitive environments and in allergy free housing. Impregnated deltamethrin remains safely locked up within Trithor's blanket fibres and does not get into the environment. Trithor Termite Protection was tested by the CSIRO and has also been independently evaluated and registered by the Australian Pesticides and Veterinary Medicines Authority (APVMA). This regulatory process involved independent expert analysis by leading government appointed scientists.

TRITHOR

Termite Protection

*Subject to Annual Inspection. Refer to the warranty document for complete details.

TRITHOR for Power³

ONE

It's a barrier

Sandwiched by a rugged plastic membrane, Trithor is a physical and moisture vapour defence.

TWO

It repels

Termites naturally flee when sensing Trithor's impregnated deltamethrin.

THREE

It kills

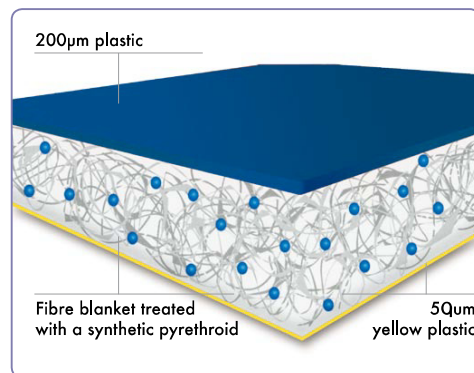

If an unlikely termite penetrates Trithor it dies on contact with the impregnated deltamethrin.

Total peace of mind

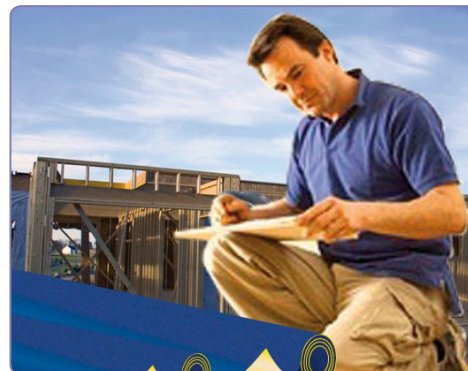

Trithor termite protection meets all performance criteria of Australian building authorities and Standards. It provides effective termite protection in excess of 50 years. We are so confident in the proven performance of Trithor, that in the unlikely event of termite penetration, we warranty \$100,000 in respect to building repair as a direct result of any termite damage. Conditions apply.

There's no better termite system

Trithor is impregnated with deltamethrin and laminated top and bottom with a rugged plastic membrane. The unique fibre blanket within Trithor adds to its durability and effectiveness. The non-woven blend of fibres within Trithor, in addition to holding the deltamethrin crystals so they remain ever ready to kill and repel termites, is also structured to prevent termites penetrating.

Trithor is a flexible system that can be installed in many difficult and complicated situations including multiple penetrations, step-downs etc. Trithor can even be moulded around unusual building designs and is easily cut and joined ensuring protection at all times. Trithor is quickly installed and has no sharp edges to affect anyone in contact with it. It is simply superior.

Insist on it by name
